Harbinger Interactive Learning Launches eLearning Course Modernization Services

Harbinger approaches course modernization through the newest addition to its array of interactive learning solutions - Legacy content conversion.

The Harbinger Interactive Learning team recently launched legacy content conversion services, thus taking their range of offerings a notch higher in the interactive learning solutions domain.

Harbinger, as an organization, is known for its learner-centric, cost-effective, and modern learning solutions. The team understands that with the proliferation of smart phones and other mobile devices, user experience has moved to a different level altogether. To meet the modern learning requirements, people would need to upgrade their legacy courses to newer, industry acceptable formats. Courses created using Flash, older versions of Articulate Storyline or Presenter, Adobe Captivate, or Lectora, need to be converted to newer formats like responsive HTML5 or be redesigned as microlearning nuggets. Harbinger's legacy content conversion services are aimed at doing exactly the same.

When asked about how this new service will be helpful for prospective organizations, Poonam Jaypuria, Vice President - eLearning, Harbinger Interactive Learning, mentioned, "Many organizations have created hundreds of courses over last several years. The course content is still relevant and instructionally sound; however they are no more adding any business value due to outdated support and design, inability to work on latest smart-phone devices and browsers. Harbinger aims to bring a wholesome solution for such organizations who would like to convert these courses to latest standards, with a shorter time-to-market."

Harbinger's legacy content conversion approach primarily follows the guidelines of rapid conversion of data through automated tools and processes, use of responsive design styles, application of best-in-class instructional design methodologies, an attempt at making content searchable using metadata and enhanced tracking provisions. All these when combined, can have a major impact on the time-to-market and costs.
